-- = Not available. Most recent year is preliminary.

1/ All data are on a calendar year basis. All product-weight data have been converted to fresh (farm) weight.

2/ Compiled by ERS from data of USDA, National Agricultural Statistics Service.

3/ Compiled by ERS from data of U.S. Dept. of Commerce, U.S. Census Bureau.

4/ Stocks data estimated by ERS based on available data and historical relationships between stocks and pack.

5/ Accounts for shipments to U.S. territories from 1978-88.

6/ Share of domestic availability accounted for by imports.

7/ Share of total supply that is exported.

-- = Not available. Cwt = hundredweight. Most recent year is preliminary.

1/ Estimated by ERS based on data from USDA, National Agricultural Statistics Service and the American Frozen Food Institute through 2000. After 2000, shelf-stable processing is set at 34 percent of processing carrot production, the share packed frozen between 1994-2000. Data for 2016-19 estimated by ERS.

2/ Source: U.S. Department of Commerce, U.S. Census Bureau. All product-weight data have been converted to a fresh (farm) weight using a factor of 1.33 through 2005. After 2005, the factor was revised to 1.18.

3/ Estimated by ERS based on data from the National Food Processors Assoc through 1989 when reporting ceased.

Source: USDA, Economic Research Service.

-- = Not available. Cwt = hundredweight. Most recent year is preliminary.

1/ Marketing year begins July 1 of listed year and ends on June 30 of the following year. Due to lack of data, this table excludes processed mushroom stocks.

2/ Source: USDA, National Agricultural Statistics Service.

3/ Source: U.S. Department of Commerce, U.S. Census Bureau. Includes canned, frozen, and dried mushrooms. Canned converted to a fresh (farm) weight using a factor of 1.538, frozen factor is 1.5, and dried factor is 10.0. Dried exports adjusted using Canadian data from 1979-88.

4/ Deflated by the GDP implicit price deflator, 2012=100.

Source: USDA, Economic Research Service.

-- = Not available. Cwt = hundredweight. Most recent year is preliminary.

1/ Excludes onions for fresh, canning, and freezing.

2/ Source: USDA, National Agricultural Statistics Service. Estimated by ERS from 1979-92 as 76 percent of California Summer Crop.

3/ Source: U.S. Department of Commerce, U.S. Census Bureau. All product-weight data have been converted to a fresh (farm) weight using a factor of 9.0.

4/ Stocks are for raw product to be processed and do not include finished inventory. Estimated by ERS as 80 percent of California summer onion stocks from 1970-80.

Since 1980, estimated by ERS as 2.5 percent of U.S. Jan 1 onion inventory.

5/ Estimated by ERS as 50 percent of California's summer crop shrinkage and loss (assumes lower shrink in processing).

6/ Unit value of California onions destined for processing. Source: USDA, National Agricultural Statistics Service.

7/ Deflated by the GDP implicit price deflator, 2012=100.

Source: USDA, Economic Research Service.

-- = Not available. Cwt = hundredweight. Most recent year is preliminary.

1/ Source: USDA, National Agricultural Statistics Service. Data estimated by ERS for 2016-19.

2/ Source: U.S. Department of Commerce, U.S. Census Bureau. All product-weight data have been converted to a fresh (farm) weight using a factor of 0.739 through 2004. After 2004, factor updated to 1.25.

3/ Computed from data of the National Food Processors Association through 1989. Estimated by ERS after 1989. From 2000 forward, Dec 31 stocks estimated as 40 percent of production.

4/ Deflated by the GDP implicit price deflator, 2012=100.

-- = Not available. Cwt = hundredweight. Most recent year is preliminary.

1/ ERS estimates based on State production data and USDA, Agricultural Marketing Service fresh shipments. California data included pimientos through 1999.

2/ Computed by ERS from data of U.S. Department of Commerce, Bureau of the Census after 1988. Imports for 1980-88 were estimated by ERS. Imports include fresh, canned (conversion factor=2.41), and dehydrated products (factor=8.0) on a fresh-weight basis. Imports exclude pimientos and paprika powder.

3/ Computed by ERS from data of U.S. Department of Commerce, Census Bureau. Exports consist of dehydrated converted to a fresh-weight basis, plus 10 percent of the fresh pepper/pimiento export category since chile exports are combined with bell peppers by Census.

4/ Dry basis converted from fresh-weight (wet) equivalent using a factor of 5.0 through 1988 and a factor of 8.0 thereafter.

5/ Through 1999, represents the average price for all chile peppers in New Mexico, calculated on a wet basis. After 1999, price is from USDA, NASS.

6/ Deflated by the GDP implicit price deflator, 2012=100.
